21st May, 1947.

My dour Photnagar,

I all proposing to take a three to four weeks holiday in Simla during June. Of course it will be a busman's holiday inasanch as I intend to use the opportunity to work on my book without intervention. For will remember that it was our intendion to call a mosting of the Atomic Research Counsistee at the beginning of June in Travancore. I do not think this will be possible now. I propose calling the meeting in Bombay in the first week of July, or if you think a mosting should be hold earlier then in the month of June in Simla. Please let me have your views. I suppose it would be several months before the new Atomic Theory Beard is actually instituted.

As I told you in our various conversations during the last fer months, I have been waiting for the satting up of the atomic innergy beard and the agreement with Travancore to go through before putting forward, what I consider to be, a very important project for India. The time is at last come when at the first meeting of the Board we should decide what stops should be taken to set up a small pile at this Institute as seen as possible. What I have in mind is what is known as the Initial Earo Energy Experimental Pile, and although the free energy available is only a few watte the neutron density is very high and the pile could be used not only for producing tracer elements but for testing the purity of substances required in the setting up of a larger pile. It would also give us experience in the operation of a pile, and in training people for it. I have already put two people on to work out theoretically the equations for the pile. I am also putting some

of the new team of people on the high energy accelerator scheme on making special types of ionisation chambers and other instruments which are used at thalk River for detecting the intensity of the various radiations from a pile. We have received from them blue-prints, just de-classified of some of the instruments used by them. These instruments are absolutely necessary if a pile is to be operated successfully without danger to the personants.

This Lie regards,

Yours sinearaly.
